*Ratings correct as at 31.10.2022.

Awards and ratings are based on past events and are not an indication of future performance. Ratings are not a recommendation.

**FOR INVESTMENT PROFESSIONALS ONLY,
NOT FOR DISTRIBUTION TO RETAIL CLIENTS.**

Risks

- The performance information presented in this presentation relates to the past. Past performance is not a reliable indicator of future returns.
- The value of investments will fluctuate which will cause Trust prices to fall as well as rise and investors may not get back the original amount invested.
- In certain market conditions companies may reduce or even suspend paying dividends until conditions improve. This will impact the level of income distributed by the Trust.
- Fees will be deducted from capital which will increase the amount of income available for distribution; however this will erode capital and may constrain capital growth.
- The trust will invest predominantly in companies that have exposure to infrastructure. This can mean the trust is more sensitive to price swings than other less concentrated trusts.
- Trusts that invest in specific sectors or industries may carry a higher risk and display greater volatility than trusts with a more diversified portfolio.
- The level of income paid by the trust may fluctuate and is not guaranteed.
- Forecasts are not reliable indicators of future performance.

Premier Miton Global Renewables Trust

Investment case

1. Renewables are the lowest cost form of electricity generation
2. Renewables are a secure domestic source of energy
3. Returns have low correlation to GDP
4. Exceptional levels of growth
5. Renewables are the single most important element in the fight against climate change

While the London listed renewable energy funds have been a good source of income, the Premier Miton Global Renewables Trust has the potential to deliver not just income but capital growth and lower underlying risk through higher diversification

PMGR is a pure-play exposure into global listed renewable generation companies with a focus on electricity generation infrastructure rather than “clean tech”

Investment proposition

Renewable energy growth and income through a global portfolio of listed equities

Management team

James Smith

Premier Miton Global Renewables Trust PLC manager, co-head infrastructure investment

- Joined the group in 2012
- 22 years of experience covering infrastructure
- 14 years as lead analyst and assistant manager for Utilico Emerging Markets Limited and Utilico Investments Limited
- Chartered accountant and barrister

Jim Wright

Premier Miton Global infrastructure Income Fund manager, co-head infrastructure investment

- Jim Wright joined the group in January 2017
- Manager of the Global Duration Equity Portfolio at the British Steel Pension fund
- Chartered accountant

Claire Long

Head of Investment Trusts

- Claire Long is Head of Investment Trusts for Premier Miton Investors, and is currently responsible for managing Board and shareholder relations for the Premier Global Infrastructure Trust, Miton UK MicroCap Trust, MIGO Opportunities Trust and The Diverse Income Trust
- Claire was co-manager of the Premier Global Infrastructure Trust and Premier Global Infrastructure Income Fund. Claire joined Premier Asset Management in 2008, and has 20 years of investment experience
- Claire is an associate of the CFA UK

Helene Winch

Head of Responsible Investing

- Helene joined the group in September 2019 and is responsible for overseeing Premier Miton's overall responsible investing strategy and development, including co-ordinating the integration of ESG factors into Premier Miton's general investment philosophy, process, oversight and reporting on stewardship activities.
- Her previous roles include, Senior Responsible Investment Adviser at HSBC Global Asset Management, Head of Policy and Research at the Principles for Responsible Investment, Portfolio Director at Low Carbon Ltd and Head of Policy at BT Pension Scheme Management.

Investment process

How we create the portfolio

1. Understand the universe

Proprietary database of global renewable companies

Review of Government policies, targets, incentive schemes, taxation

Technical and market knowledge, including electricity markets, gas markets, carbon pricing & industry developments

Identify areas of strong renewable growth, supportive policies & strong energy demand

2. Company research

Focus on valuation, growth & yields

Understand the balance sheet

Understand company assets, contracts, revenues and relevant legislation

Build and expand database. Constant analysis of results, IPOs, markets

Focus on value, understand the business, look to select the best companies at the right price

3. Portfolio construction

Find optimal mix of:

- business models
- geographic allocation
- growth vs yield
- large vs small caps

Looks to secure high and growing yield with long term growth exposure, while minimising underlying risks

Investment process

What we look for / what we look to avoid

Macro / country factors

Political	Regualtion	Power markets	Growth	Currency
Long term targets	Stable frameworks	Imbalance demand / supply	Dynamic economies	Hard currencies
Positive track records	Inflation linkages	Carbon pricing	Ample physical space	Hedging when cost effective / prudent
Changing the rules	Asymetric risks	PPA availability	Low existing renewable share	E.M Currencies
Populism		Volatility	Slowing economies	

Micro / company factors

Valuation	Balance sheet	Revenues	Business	Complimentary sectors
Strong cash flow yields	Fixed rate debt	Long-term PPAs	Developer relationships	Storage
Modest EV/EBITDA + P/E	Asset level financing	Inflation linkages	Multi-year pipelines	Networks
Under-appreciated pipelines	Floating rate debt	Long-term nominal contracts	Skin-in-game management	Capital goods (turbines etc)
Over-valued pipelines	Excessive leverage	Excessive merchant exposure	Troublesome assets	Technology
Earnings inflated by asset sales			Technology risks	Non-recurring revenues
High valuation metrics				

Comparison of Premier Miton Global Renewables to directly invested renewable investment companies

	Premier Miton Global Renewables Trust	Typical profile: direct investment renewable investment companies within the AIC Renewable Energy Sector (Greencoat UK Wind, Bluefield Solar, US Solar fund, etc)
Assets	Listed equities	Unlisted assets
Geographic focus	Invests globally	Invests in a single region (UK /Europe /US)
Technology	Multi generation technology	Usually specialise in a single technology (wind or solar)
Developer profits	Holds both renewable developers and investment companies	Do not take development risk, buy in secondary market only
Value chain	Full value chain including generation, distribution and storage	Specialise in generation or storage
Market risk	Modest market risk when appropriate	Usually actively avoid market risk
Asset turnover	Medium, reflecting portfolio changes to take account of changing markets and opportunities	Buy and hold private assets for very long term

Medium risk, high potential return

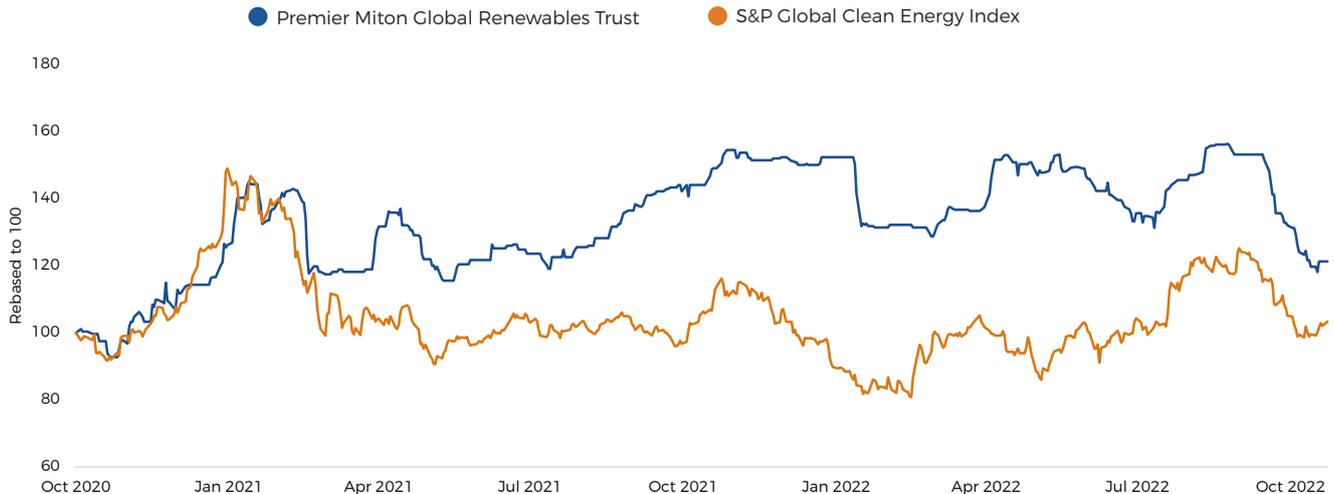

Low risk, medium potential return

PMGR is a unique way to invest in renewable energy

PMGR performance vs S&P Global Clean Energy Index

Since investment policy change 9 October 2020

Rebased 100 at 9 October 2020, GBP

Strong outperformance of comparator since change of investment policy

PMGR performance vs UK listed direct renewable investment companies

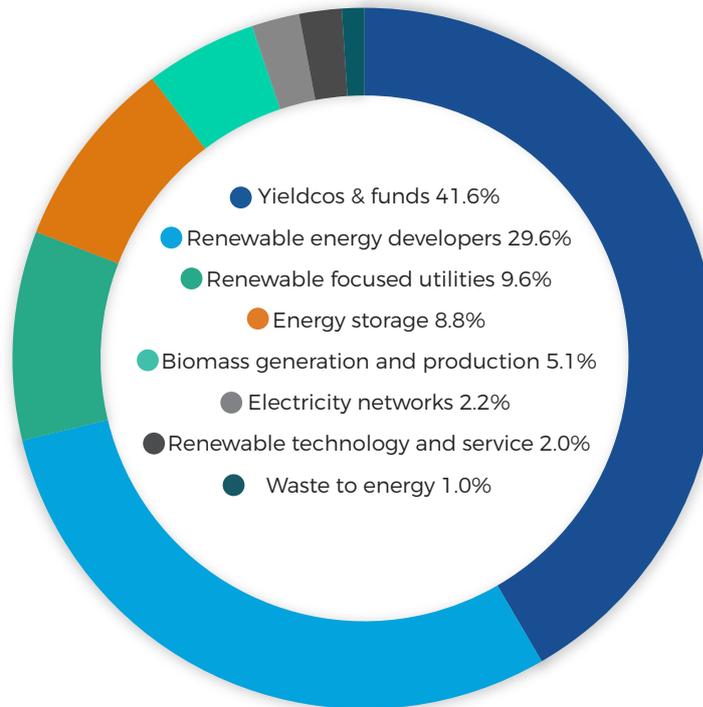

Since investment policy change 9 October 2020

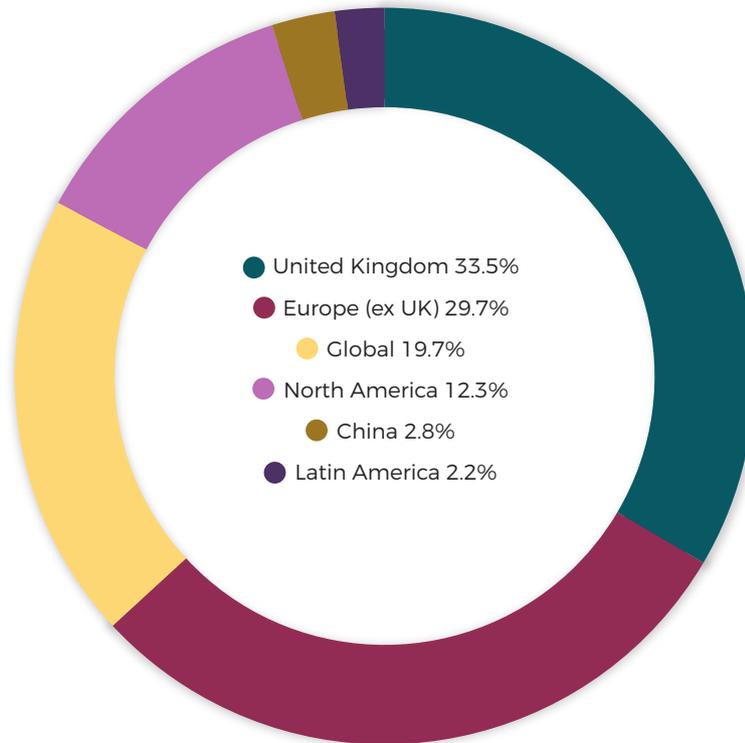

PMGR has been a top end performer in the UK renewable energy peer group

Source: Bloomberg, dividend total return performance. Performance is shown net of fees. Data from 09.10.2020 to 31.10.2022. The companies have been chosen as similar to the Premier Miton Global Renewables Trust; they generate and own renewable energy assets and are classified within the AIC renewable energy sector.

PMGR offers a diversified exposure to asset backed renewable energy companies

PMGR offers a balanced global renewables exposure

The renewables opportunity

Renewably generated electricity has three growth legs in coming years

Historic / near term - growth of renewables within electricity generation mix

Renewable cost reductions

Higher carbon prices / expansion of carbon pricing to new locations / carbon border tax adjustments

Direct restrictions on technology (coal phaseout)

Near / medium term - growth of electricity share of energy consumption

Electric vehicles

Space heating

Light industrial

Medium / long term - green hydrogen

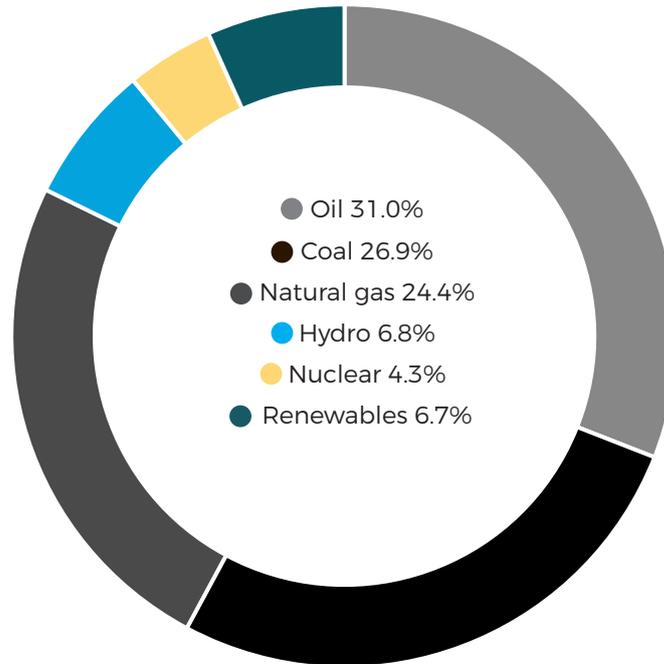

Blending / replacement of natural gas in the gas grid

Heavy transport (trucks /sea freight /air)

Industry

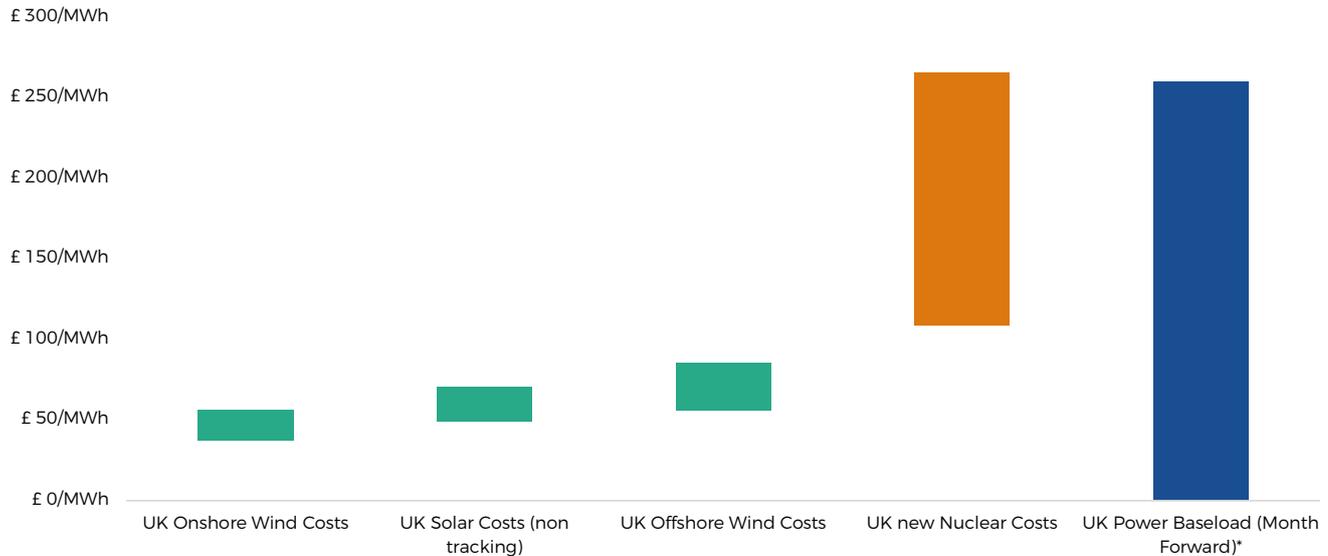

By 2050 electricity will provide between 49% and 53% of total consumed energy, up from 20% today (BNEF, April 2022)

Global share of primary energy 2021

Levelised cost of energy (“LCOE”)

United Kingdom, range per technology (new build)

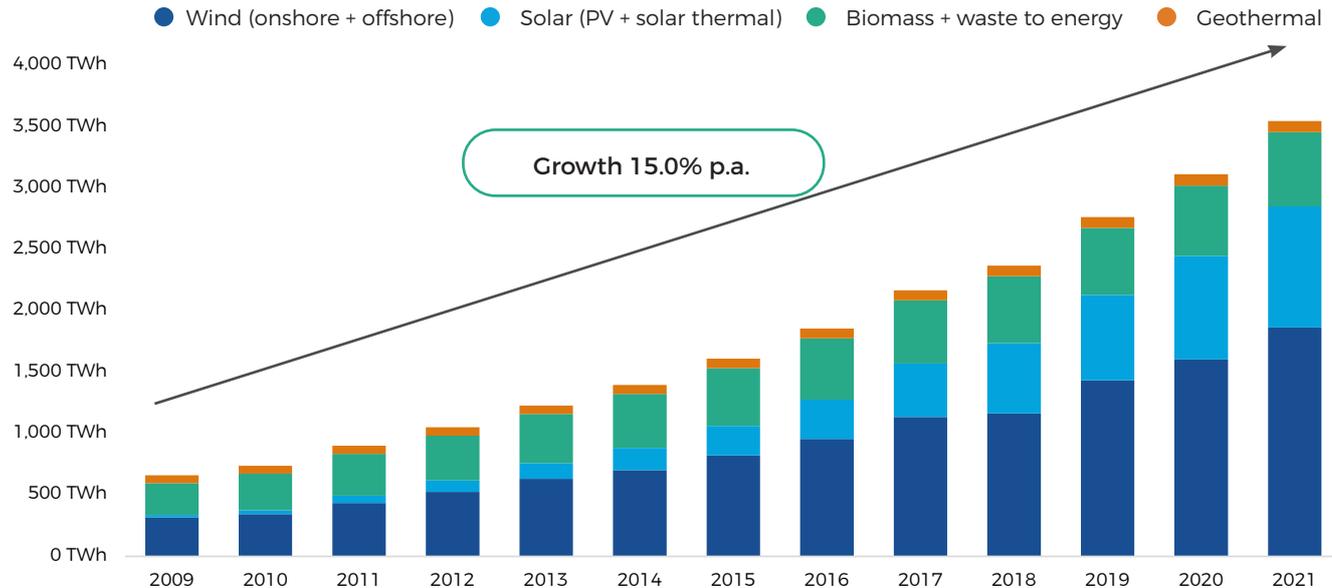

Source: Bloomberg New Energy Finance. Levelised cost of electricity UK H1 2022.
BNEF LCOE figures translated from USD to GBP at 1.1615 (rate at 31.10.2022)

*Source: Bloomberg: UK month forward baseload price year to date, taken 31.10.2022.

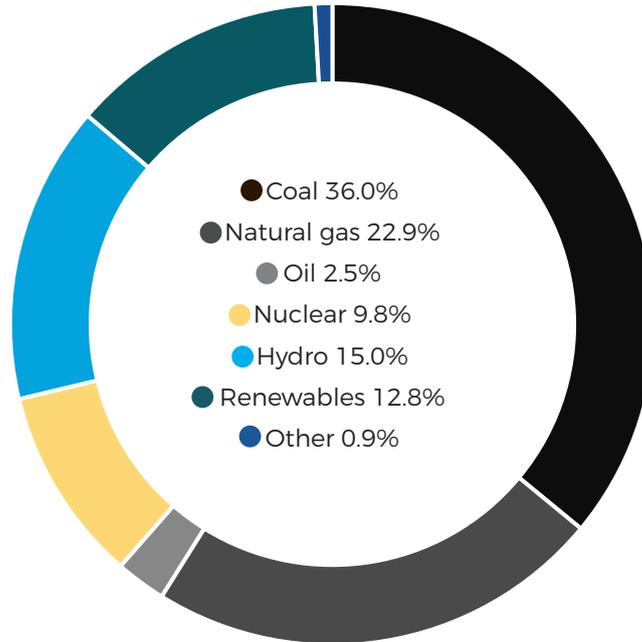

Growth in renewable energy generation has been strong

Global renewable energy production by technology

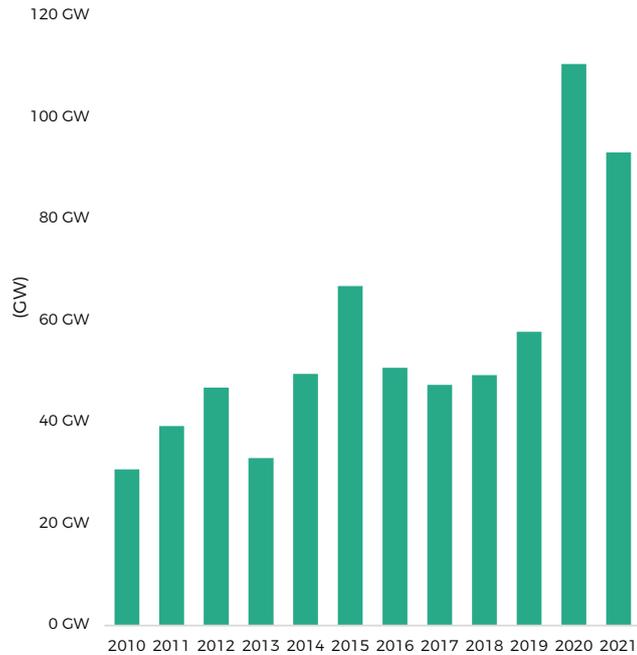

Wind retains dominant position
Solar has shown the strongest growth in recent years as its costs have converged with wind

Global electricity generation by fuel type

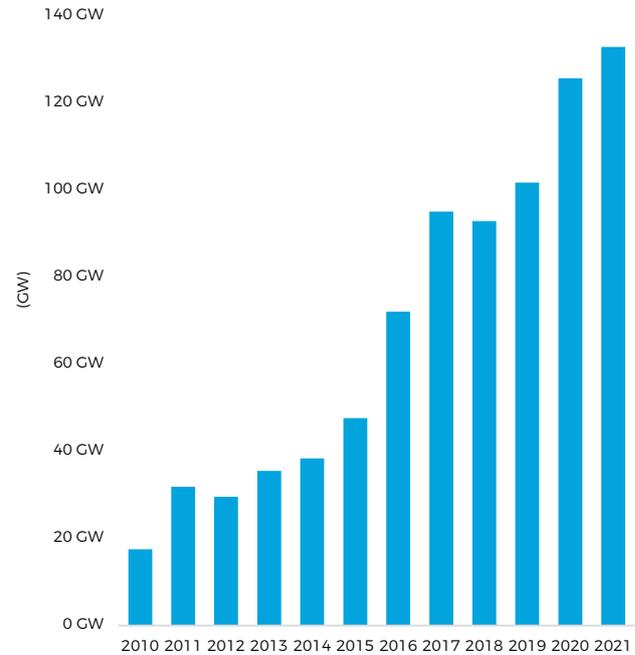

Installations of global renewable energy assets have been increasing

Global wind energy capacity additions

Global solar energy capacity additions

15 largest holdings

Case study: Greenergy, growing strongly in the global solar market

EBITDA and net income progression

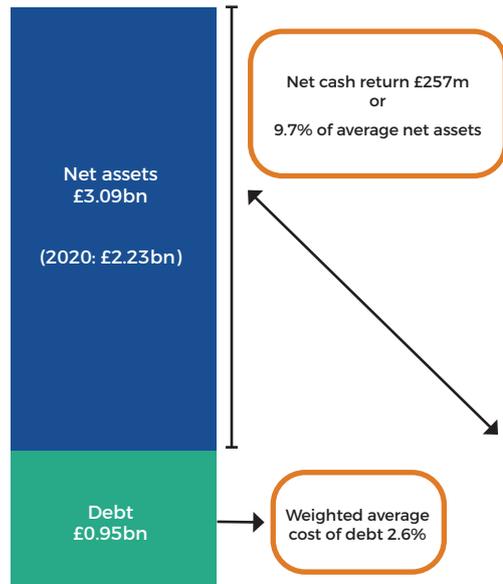

Investment arithmetic Bloomberg consensus

	2023e	2024e
P/E	21.1x	14.5x
EV/EBITDA	11.3x	7.1x
Price/ Book	3.3x	2.9x
Return on equity	14.6%	17.1%

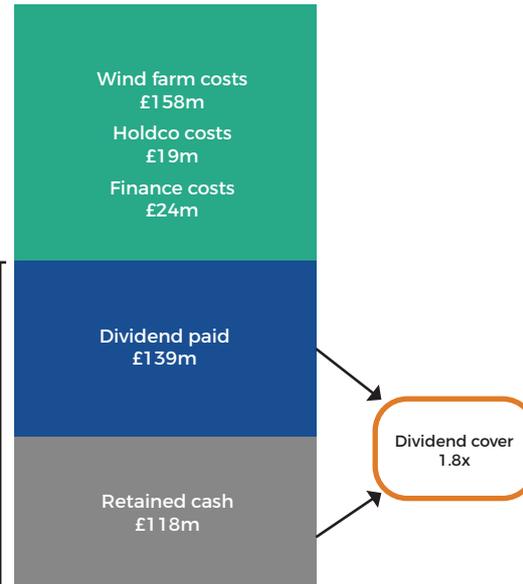

Highly profitable, fast growth, generating shareholder value
H1 2022 Greenergy had 1.4 GW operational and under construction,
with pipeline of 13.0 GW

Case Study: Greencoat UK Wind, value generation from UK wind assets

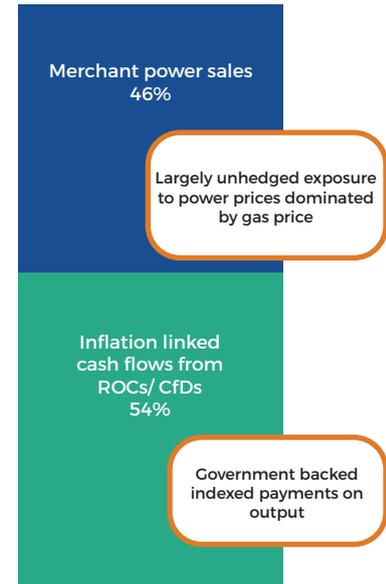

Balance sheet (December 2021)
Gross assets £4.04bn...

... produced revenue of £458m
which is absorbed as follows:

Long term portfolio
expected revenue split

Combination of index linked revenues,
exposure to bouyant power markets, low (fixed) cost of debt

Premier Miton renewable energy investment credentials

- **Extensive years of combined experience in infrastructure and renewable energy investment**
 - Excellent performance record, 12.0% p.a. since running fund from 2012, 11.4% p.a. 3 years to July 2022¹
- **Team has significant renewables investment experience**
 - Knowledge and experience of passive and direct renewable investment
 - Experience of investing in renewables globally including both developed and emerging markets
- **Dedicated sustainable investing resource**
 - ESG investment resource available to investment team
- **Several years of renewables experience within PGIT/PMGR**
 - Renewable Energy was the Trust's largest sector exposure in each of 2017, 2018 and 2019 at approximately 30% of the portfolio. PMGR has dedicated renewables policy from 9 Oct 2020.
- **Following Premier / Miton merger, team can call on wider multi-disciplinary investment experience**

¹Source: Bloomberg, data to 31.10.2022, based on share price total return.

Investment summary

PMGR offers a unique exposure to global renewable energy companies

- Focussed on asset operators with established technologies
- Portfolio offers a balanced combination of value, yield and growth

A diversified way to invest in global renewable energy

List of Appendices

Key facts

Ordinary shares	Number: 18,238,480 Bloomberg: PMGR LN SEDOL: 3353790GB
ZDP shares	Number: 14,217,339 Bloomberg: PMGZ LN SEDOL: BNG43G3GB Redemption: 127.6111p on 28 November 2025
Management fees	0.75% per annum. Split 40% revenue, 60% capital, 1.65% OCF ¹
Year end	December
Dividend payments	At the end of March, June, September and December
Directors	Gillian Nott (Chairman), Victoria Muir, Melville Trimble
Auditor	KPMG
Stockbroker	finnCap

Transaction costs will also apply. For more information about the impact of costs and charges on your investment, please read the Key Information Document. ¹Date as at 31.12.2021. The ongoing charges figure (OCF) is not the same as the ongoing costs figure set out in the Company's key information document. The key differences are that gearing costs and portfolio transaction costs are not included in the OCF. In addition costs are calculated on slightly different bases. The OCF figure set out above mirrors that in the Report and Accounts and is based on costs incurred in the year which are likely to recur in the foreseeable future.

Significant events during James Smith management tenure

May 2012	James Smith appointed manager of Premier Energy & Water Trust ("PEWT")
August 2014	Fixed wind up date of December 2015 replaced with unlimited life and 5 year continuation votes, the first in 2020
December 2015	ZDP rollover - PEWT repays £25.7m of 2015 ZDP shares, new 2020 ZDP launched with value of £24.1m
November 2017	Name change to Premier Global Infrastructure Trust plc
2018-2020	Renewable Energy increasing weighting in portfolio
9 October 2020	Shareholders approve update to investment policy to focus on renewable energy
November 2020	Name change to Premier Miton Global Renewables Trust PLC ("PMGR")
November 2020	ZDP rollover - PMGR repays £16.0m of 2020 ZDP shares, new 2025 ZDP launched with value of £14.2m
December 2020	Completion of portfolio transition to renewable energy completed, save for 1 liquidation holding

Strong performance plus ZDP re-financing has resulted in a reduction in gearing and structural risk over the past three years

	December 2018	December 2019	December 2020	December 2021
Gross assets	£48.0m	£55.2m	£45.7m	£53.4m
ZDP liability	(£27.7m)	(£29.0m)	(£14.3m)	(£15.0m)
Equity shareholders' funds	£20.4m	£26.2m	£31.4m	£38.4m
Gearing ¹	135.8%	110.7%	45.5%	39.0%
ZDP share cover ²	1.49x	1.76x	2.32x	2.74x

- ✓ Gearing has fallen substantially
- ✓ Shareholders' Funds have increased
- ✓ Ordinary Shares now comprise the majority, rather than the minority, of total capital

Source: Premier Miton. Premier Miton Global Renewables Trust PLC annual report and accounts 31 December 2021.
¹Gearing = ZDP Shares / Equity Shareholders' Funds. ²Non-cumulative cover = Gross assets at year end dividend by final repayment of ZDPs plus management charges to capital. The figures above have been rounded.

Trust risks

Trust specific risks

Some of the main specific risks of investing in this trust are summarised here. Further detail is available in the prospectus for the trust.

Currency

Where investments in a fund are denominated in currencies other than sterling (for example, if a fund holds assets priced in euros), its value will be affected by changes in the relevant exchange rate. Certain other investments, such as the shares in companies with profits from other countries, will also be effected.

Emerging market countries

Investments made in bonds, equities or other assets in less-developed countries generally carry higher risk than in developed countries.

Equities

Equities (shares) can experience high levels of price fluctuation.

Fixed interest securities

Government and corporate bonds generally offer a fixed level of interest to investors, so their value can be affected by changes in interest rates. When central bank interest rates fall, investors may be prepared to pay more for bonds and bond prices tend to rise. If interest rates rise, bonds may be less valuable to investors and their prices can fall.

Gearing / leverage

Trusts that use gearing / leverage (this can be achieved by the use of derivatives) can experience significantly higher price fluctuations.

Inflation

Higher inflation can lead to some investments falling in value, particularly those with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Issuer credit

There are times when the issuer of a security (for example, a company that has issued a bond) is unable to make income payments or repay its debt. When this happens it can result in losses for the fund.

Legal/tax

The income or capital gains from investments can sometimes be affected by changes in legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in a fund may be difficult to sell and buy at the desired price. The fund value could fall as a result.

Non-investment grade bonds

Bonds with a higher risk that the bond issuer might not meet its income or repayment obligations, as assessed by independent bond rating companies.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the fund holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Trust risks

(continued)

Smaller companies

Investment in smaller companies is typically higher risk than investment in larger companies. Shares in smaller companies can experience greater levels of volatility.

Renewable energy sector concentration

Funds that invest in specific sectors or industries may carry a higher risk and display greater volatility than funds with a more diversified portfolio.
